

August 16, 2018

Dear Customer,

We are pleased to inform you that two water supply wells have been added back into your water system. As part of the re-installment of these wells, a new iron and manganese and radium removal filtration system has been installed. Aqua has worked for many months with State and local agencies to obtain all of the necessary approvals for the treatment system. The filtration system will treat and remove iron and manganese as well as naturally occurring radium, which exist naturally in the groundwater in many wells across the state of North Carolina. We are optimistic that re-installment of the two water supply wells and the new treatment system will improve the service and reliability of the water system. If you have any questions, please contact us at 1-877 987-2782.
